

Enterprise System

The warehouse management system from Unipart

Proven | Trusted | Transformative

Unipart Digital Enterprise System

Built by logistics experts for logistics experts

Warehousing is one of the fastest growing industries year on year. It is a highly competitive market, therefore an efficient warehouse is essential to support the smooth running of any business.

Choosing the correct warehouse management system for your business can improve operator performance, cost effectiveness and, most importantly, customer satisfaction. Not only is it important to have the correct system, it's crucial to ensure that the system continues to be suitable as your business grows, and that it enables your operation to run at effective capacity.

Warehouse efficiency is critical to getting it right – all the more so when you are committed to providing the best service for your customers.

This is what makes Unipart Digital Enterprise System so invaluable: its ability to streamline processes, provide full traceability and optimise warehouse processes.

Developed by Unipart, Unipart Digital Enterprise System is a warehouse management tool that uses the latest features to help control and manage the day-to-day operations in a warehouse to increase overall efficiency. UDES allows you to optimise the performance of your operation whilst providing valuable insights to ensure continuous improvement.

The UD Enterprise System

UD Enterprise System was developed in 2016 to create a faster and more affordable Warehouse Management System based on our own experiences and requirements at multiple Unipart warehouses.

UD Enterprise System has been proven in our Cowley distribution centre, which is one of our most demanding warehouse environments in the UK.

It's from here that we supply multiple production lines for prestigious automotive customers. Each vehicle is customised for the individual car buyer, so the operation needs to be extremely flexible to ensure the right parts are available at exactly the right time.

Our goal was to create a faster, more agile Warehouse Management System (WMS) to enable us to use a strategic solution to maximise our profitability and performance.

By creating and implementing UDES we...

Increased inventory accuracy from 67% to 99.8%

Increased production line operations by 66%

Provided just-in-time deliveries and received real tangible traceability data

=

An increase in efficiency and cost savings

Maximise the profitability and efficiency of your warehouse with UD Enterprise System

UD Enterprise System analyses and unlocks the potential of your data. This enables you to have insight into your operational efficiency, allowing you to create continuous improvements and optimise your work processes.

The system will empower you to:

UD Enterprise System is proven, trusted and transformative

As companies seek to transform outdated systems or manual processes with modern digital solutions, UD Enterprise System provides the answer.

Whether you are using an automated system or have no system at all, we will guide you through the end-to-end implementation process by consulting with you on your business objectives and analysing your workflows to ensure you get the most from our system. We will provide expert and knowledgeable advice when you need it.

Out of the box, UD Enterprise System meets the needs and demands of warehouse operations of all sizes, using our primary features and functions that are continually updated to provide you with the very best performance. We can also support you in building the ideal configuration for your organisation using a wealth of first-hand experience from Unipart's network to meet your supply chain requirements.

Supporting Supply Chains

By using Unipart Digital Enterprise System you are able to reap the benefits of single, low cost, software solution from a company with a long track record of delivering transformative results for some of the world's most demanding companies.

To stay ahead of competitors, quick adaptation is key.

UD Enterprise System is a cloud based system therefore it can be quickly adapted to meet your requirements. This enables you to deliver a consistently high service at a low cost whilst having real time visibility, scalability and market reactivity

A closer look:

1

UD Enterprise System's high quality design allows for seamless installation with minimal downtime requirements, a key benefit when transitioning your operation

2

UD Enterprise System support & training services drive efficiency and quality throughout your operation

How easy is implementation?

Industrial-scale capabilities are available in weeks instead of months, which enables us to deliver the same level of warehouse management functionality as an on-premises system, but without the IT overhead. You're up and running quickly and smoothly at a more affordable cost.

Keeping you in control of your inventory, and providing system-wide confidence you can trust

Unipart Digital Enterprise System provides you with industry-leading practices, such as mobile RF barcode scanning, mobile printing, defined strategies for put-away and picking, data insights, and discrepancy management. With hundreds or even thousands of SKUs to handle, your operation can quickly become a chaotic and inefficient process if you're relying on spreadsheets or outdated systems. Unipart's Digital Enterprise System equips you with the tools to identify these operational inefficiencies enabling you to focus on what really matters.

Main Features

- Intuitive Hand Held Terminal and Desktop interfaces
- Flexible setup and configuration, making it suitable for organisations of all sizes
- Accelerated implementation
- Full barcode scanning
- Full life cycle traceability
- Photo assured picking
- Online ordering tool
- Real-time inventory with full traceability
- Interfacing with a multitude of systems
- Advanced EDI functionality

Key Benefits

UD Enterprise System is a flexible, customisable alternative to traditional WMSs

Combines Unipart's expertise in digitalisation with experience in warehousing

Intuitive mobile interface

UD Enterprise System is cloud based: this avoids the large up-front costs of onsite servers

We maintain and update your system on our secure servers

UD Enterprise System is an industrial strength product which is perfect for operations of all sizes

Real-time data providing you with continuous insights into your warehouse performance

UD Enterprise System enables more efficient ways of working
